Net: **67.45 EUR** Gross: **67.45 EUR**

Photocells are designed for cooperation with gate automation systems. Wireless. The photocells have the ability to adjust the angle horizontally. The set includes transmitter and receiver.

An infra-red beam is sent to the receiver from the transmitter. If an object appears in the field of the created barrier (eg a car or a man), the photocell will react by sending a signal to change the state at the control unit input.
