

Code: AX-2000

VGA-VIDEO CONVERTER **AX-2000**

The AX-2000 converter allows to connect a VGA video signal (for example from computer) to the TV monitor using AV input (Composite Video signal) or S-Video input. It can be used to any TV monitor (TV-set receiver) also to LCD-TFT models.

Device is perfect for presentation purposes, slides shows, where computer image should be presented on bigger monitor or TV-set screen. During signal conversion from VGA to PAL standard there is a slight loss of quality due to scale of the image from more details to less details.

Input:	VGA
Input signal possible standards:	PAL-B/D/G/H/I NTSC
Output:	Video composite (Cinch), S-VIDEO, VGA (bypass)
Supported resolutions:	640x480 @ 60/72/75/85 Hz 800x600 @ 60/72/75/85 Hz 1024x768 @ 60/70/75/85 Hz 1280x1024 @ 60 Hz
OSD menu:	✓
Possible settings:	vertical and horizontal size, vertical and horizontal position brightness, contrast, saturation sharpness, hue
